DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it is not provided on a separate page.

Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claims 8-14 are objected to because of the following informalities:

Regarding claim 8, the claim language includes a step "modifying the packet loss priority ----- on at least one of the connection type and application-specific data traffic type", in lines 8-10. It is suggested that this step amended as followed, "modifying the packet loss priority information of the buffered data packet depending on the specific connection or application-specific data traffic type", since a modification needed only when the connection should never be rejected in the event of overload, see the instant application in page 14-line 2.

Appropriate correction is required.

Allowable Subject Matter

3. Claims 8-14 are objected but would be allowable if rewritten to overcome the objection set forth above.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Katsube et al. (US 5,267,232); VanDervort (US 5,764,626); Hatono et al. (US 5,959,991); Kilkki (US 6,081,505); Greaves et al. (US 6,396,815); Briem (US 6,680,949); Petit (US 6,762,996); Lyles et al. (US 5,519,698) are cited to show a method for aligning packet loss priority information in a data packet switching communication device, which is considered pertinent to the claimed invention.
